the 'information' and 'communication' fields. The 'information' field is defined as:

...the study of the nature, uses and functions of information, and the ways in which it is created, communicated, evaluated and used. (p. 1)

The 'communication' field is defined as:

...the study of the nature, uses and functions of communication, and the ways in which it is created, communicated, evaluated and used. (p. 1)

These definitions are very broad and cover a wide range of topics. However, they do provide a useful starting point for discussing the relationship between information and communication.

In the following sections, we will discuss the relationship between information and communication in more detail. We will also discuss the role of information science in the field of communication.

Information science is a discipline that studies the nature, uses and functions of information. It is a multidisciplinary field that draws on a variety of disciplines, including psychology, sociology, and computer science.

Information science is concerned with the ways in which information is created, communicated, evaluated and used. It is a field that is constantly evolving, as new technologies and methods are developed.

Information science is a field that is closely related to communication. In fact, many of the same issues and questions are raised in both fields.

For example, both information science and communication are concerned with the ways in which information is communicated. They are also concerned with the ways in which information is evaluated and used.

Information science and communication are two fields that are closely related and that share many of the same issues and questions. They are both fields that are constantly evolving and that are of great importance to society.

In the following sections, we will discuss the relationship between information science and communication in more detail. We will also discuss the role of information science in the field of communication.
